

HCP Onboarding API Integration Guide

1. Endpoint

```
POST /api/hcp/onboarding
```

2. Authentication

The backend uses Laravel Sanctum SPA authentication with session cookies and CSRF protection.

```
GET /sanctum/csrf-cookie
```

Axios should send cookies and the XSRF token with requests:

```
axios.defaults.withCredentials = true;  
axios.defaults.withXSRFToken = true;
```

The HCP onboarding endpoint requires the current user to be:

- Authenticated
- Role = HCP
- Email verified

3. Request Format

Because the request includes files, send it as multipart/form-data using FormData. Do not manually set the Content-Type header; the browser/Axios should generate the multipart boundary automatically.

Field	Type	Required	Validation / Notes
government_id_front	File	Yes	JPG, JPEG, PNG, or PDF; max 10 MB
government_id_back	File	Yes	JPG, JPEG, PNG, or PDF; max 10 MB
medical_license	File	Yes	JPG, JPEG, PNG, or PDF; max 10 MB
qualification	File	Yes	JPG, JPEG, PNG, or PDF; max 10 MB
liveness_status	String	Yes	Final submission currently accepts PASSED only
medical_license_number	String	Yes	Maximum 100 characters
license_issuing_authority	String	Yes	Maximum 255 characters
specialty	String	Yes	Current backend accepts a string
years_of_experience	Integer	Yes	Range: 0 to 80
consent	Boolean	Yes	Must be accepted

4. Successful Response

Expected HTTP status: 201 Created

```
{
  "message": "HCP application submitted successfully.",
  "data": {
    "verification_status": "UNDER_REVIEW",
    "submitted_at": "2026-09-29T08:30:00.000000Z"
  }
}
```

5. Liveness Behavior

For the MVP, the frontend performs the camera/liveness flow and produces PASSED or FAILED. The final onboarding request accepts only PASSED.

```
FAILED
→ Retry liveness
→ Do not submit onboarding

PASSED
→ Enable Apply
→ POST /api/hcp/onboarding
```

6. Common Responses

HTTP Status	Meaning	Typical Cause
201	Created	HCP application submitted successfully
401	Unauthenticated	No valid authenticated SPA session
403	Forbidden	Current user is not authorized for HCP onboarding
422	Validation error	Missing/invalid fields, FAILED liveness, or duplicate submission

7. Current Integration Sequence

```
GET /sanctum/csrf-cookie
↓
Signup / Login
↓
Email verification
↓
HCP Step 3 UI
↓
Liveness PASSED
↓
POST /api/hcp/onboarding
↓
UNDER_REVIEW
```
